DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 7-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Walt, II et al (7,062,831).

1. Walt, II et al teach a method for assembling a component in an assembly, the method including the steps of:

positioning the component in the assembly in accordance with a proposed position in the assembly (*see column 3 lines 1-17*);

sensing that the component is in its correct special position in the assembly by use of sensing means capable of sensing spatial relationship and/or connection of the component in relation to the assembly (*see column 3 lines 10-17*); and

communicating information regarding the sensed spatial relationship and/or connection to information processing means (*see Figure 1 and column 5 lines 42-48*).

7. Walt, II et al teach the method of any preceding claim, which includes the further step of displaying information communicated to the information processing means on information display means 54 (*see column 5 lines 28-48*).

8. Walt, II et al teach the method of any preceding claim, wherein the information processing means (50) is a computer (*see column 6 lines 5-15, and note that the controller 50 constitutes a computer because it processes information from the sensor 60*).

Response to Arguments

Applicant's arguments filed 01/04/2010 have been fully considered but they are not persuasive.

Applicant argues that Walt, II et al discloses the need for at least two different types of targets, and therefore cannot anticipate Applicant's invention which does not require multiple targets.

This is not found persuasive because the claims do not teach away from sensing and positioning multiple components. Furthermore, Walt II, et al discloses a sensor for sensing the position of a seat (12) and communicating that position with an electronic controller (*see Figure 1 and column 6 lines 8-23*).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
